

Patented modular bridge construction systems

Farm Bridge by **Unibridge**[®]

**FROM FARMS
TO MINES
WE BRIDGE
THE GAP**

- > The Farm Bridge is designed to be unpacked, assembled and put in place with equipment normally found on most farms across Australia in less than a day.
- > Can be installed by the Farmer without additional engineering or construction costs. Fully designed and engineered solution. No need for machining or welding on site.
- > Anticorrosion protection system capable of standing up to the most aggressive and harsh conditions in Australia.
- > Capacity up to 20 tonnes. Easy modular construction.
- > Transports to site on a normal semi-trailer without overload or oversize restrictions.

Patented modular bridge construction systems

Farm Bridge by Unibridge®

- > Unibridge® has always listened to their clients and customers needs and consistently solved ever evolving problems with a level of professionalism and pre-engineered excellence unmatched in the bridging community.
- > The Farm Bridge by Unibridge® is another example of this market responsiveness that has been the trademark of Unibridge® throughout the years. The Farm Bridge is designed to carry loads up to 20 tonnes and transports to site in a single 40 foot container. A patented wooden deck system ensures that livestock farmers will have no unforeseen problems with livestock crossing their bridge as well as reducing the overall cost of the Farm Bridge.
- > The Farm Bridge is designed to be unpacked, assembled and put in place with equipment normally found on most farms across Australia in less than a day. The same modular technology that is a hallmark of Unibridge® is found in the Farm Bridge making it easy to install without the need, or expense, of enlisting engineering firms and construction crews to do the job.

Basic Module

A basic module is composed of two fabricated i-beams of the same length and type (single connection or zero connection) fully painted and ready for assembly with spacers supports, guard rails, nuts and bolts, plus connecting pins and anchorage pads. Farm Bridges over 11.4m have a single connection point joining two beams to make the required length.
